

SOLAR CONTROLLER MEC4840LY

◆DESCRIPTION:

A Multitask Electronics solar controller is a small box consisting of solid state circuitry that is placed between a solar panel and a battery. Its function is to regulate the amount of charge coming from the panel that flows into the deep cycle battery bank in order to avoid the batteries being overcharged. A controller can also provide a direct connection to appliances, while continuing to recharge the battery.

3 years

RoHS (E

◆FEATURES:

PWM Charging: high charge efficiency and greatly extends the battery life.
 MOSFET as Electronic Switch: makes the controller a longer life.

•**Protection Functions:** makes the system be more secure and reliable, includes overcharge protection, deep discharge protection, reverse polarity protection of module/battery/load, short circuit protection of module/load, open circuit protection without battery, over-temperature protection, battery overvoltage shutdown.

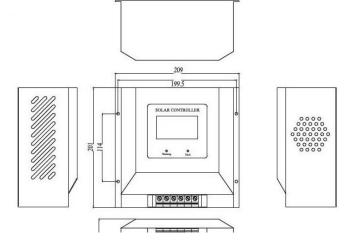

•LCD Display: real-time shows the system status of charging, discharging and fault.

•Sufficient Design Margin: maximum capacity exceeds 20% as the rated current/power, which makes the system more secure.

•Intelligent Cooling Fans: it is controlled by the real-time heat sink's temperature, which makes the fan a longer life and saving energy.

Metal Case: after spray treatment, the controller is more beautiful and durable.
