

SOLAR CONTROLLER **MEC12(24)50LN**

◆ DESCRIPTION:

A Multitask Electronics solar controller is a small box consisting of solid state circuitry that is placed between a solar panel and a battery. Its function is to regulate the amount of charge coming from the panel that flows into the deep cycle battery bank in order to avoid the batteries being overcharged. A controller can also provide a direct connection to appliances, while continuing to recharge the battery.

◆ FEATURES:

- **PWM Charging:** high charge efficiency and greatly extends the battery life.
- **MOSFET as Electronic Switch:** makes the controller a longer life.
- **Protection Functions:** makes the system be more secure and reliable, includes overcharge protection, deep discharge protection, reverse polarity protection of module/battery/load, short circuit protection of module/load, open circuit protection without battery, over-temperature protection, battery overvoltage shutdown.
- **LCD Display:** real-time shows the system status of charging, discharging and fault.
- **Sufficient Design Margin:** maximum capacity exceeds 20% as the rated current/power, which makes the system more secure.
- **Intelligent Cooling Fans:** it is controlled by the real-time heat sink's temperature, which makes the fan a longer life and saving energy.
- **Metal Case:** after spray treatment, the controller is more beautiful and durable.
